

Guidelines for creating a good password

Passwords are very important and having a strong password will better protect your data and your network. Creating passwords may seem annoying, but they are necessary. Creating a strong password can be easy. The following guidelines have been created to assist you in creating a good password.

Password guidelines:

It must be at least six characters long.

It must contain at least one number and one character.

You cannot use a previously used password.

How to avoid “bad” passwords

Avoid passwords that would be easy for someone to guess.

Don't use:

- Phone numbers
- Names (salley)
- All uppercase or all lowercase words (money, MILLION)
- Short words (dog)
- Slang (moneygrip)
- Sequential letters or numbers (qrstuv, 123456).
- Personal information (birth dates, SS#, favorite color, pets name)

When to change your password

You should change your password if:

- You have written it down and have misplaced it.
- You have shared your password with anyone else.
- You suspect someone has been using your computer without your consent.
